Post Partum Hemorrhage Bundle

Hospital of the University of Pennsylvania

Marianne Bittle MSN RNC-OB Clinical Practice Leader Mother/Baby Unit

Erika Nicholls MSN RN C-EFM Clinical Practice Leader

Labor and Delivery

September 24, 2019

Postpartum Hemorrhage Bundle

- National Partnership for Maternal Safety: consensus bundle on obstetric hemorrhage
 - Readiness and Response- OB emergency notification system, Hemorrhage cart, medications, exsanguination protocol, unit education/skills and drills
 - Recognition and Prevention- risk assessment, huddle board, cumulative blood loss
 - Reporting system- "Penn Medicine Safety Nets", OBQI committee (reviews cases of severe maternal morbidity; > 2L blood loss, ICU transfer, 4 units or more PRBCs

Risk Assessment Tool

Antepartum assessment of modifiable risk factors-

Antepartum assessment of modifiable PPH risk factors

- 1. Starting Hgb <10 or Hct <30 or Plt <70 (for potential PO versus IV Fe, steroids for ITP)
- 2. Bleeding disorder

3. Abnormal placentation (modifiable plan –location of delivery, blood availability, Oncology, etc)

**Add these above three risk factors to 3rd trimester lab section of supervision of normal /high risk pregnancy to be assessed at time of third trimester labs

Intrapartum Assessment of PPH risk

Intrapartum Assessment of	PPH IISK								
Average Risk	Elevated Risk	Highest Risk							
No significant risk factors	Prior c-section(s)/uterine surg	Placenta Previa							
Singleton pregnancy	Multiple gestations	Suspected Accreta/Percreta							
	Polyhydramnios	Platelets < 50K							
	EFW>4000g	Hgb <9							
	Grandmultiparity (>4 births)	Known coagulopathy							
	Hx of PPH	Active bleeding (> bloody show)							
	Chorioamnionitis								
	Oxytocin administration for >24 hours								
	Achievement of 40mu/min Oxytocin								
	Operative vaginal delivery								
	Significant myomas								
	Retained placenta								
	Prolonged 2 nd stage (>=3 hrs)								
	Magnesium Sulfate								
	administration								

Average Risk-Routine IV pitocin after delivery of neonate, Controlled cord traction until placental delivery

<u>Elevated Risk</u>-Preparation for delivery with appropriate uterotonics/OB hemorrhage cart available/Low threshold for T&C based on clinical judgment

<u>Highest Risk</u>-T&C (available products at delivery), preparation of appropriate uterotonics/appropriate personnel/OB hemorrhage cart outside of patient room/appropriate surgical venue

Postpartum Hemorrhage Cart

Contents-

Quantitative Blood Loss

Standardized method to be used after each delivery

QBL Calculator Vaginal Delivery				
Amniotic Fluid (0 unless had amnioinfusion*)	0			
Total Calibrated Drape Volume	0			
Irrigation (500cc unless otherwise specified)	0			
Betadyne (118cc unless otherwise specified)	0			
# of Lap Sponges	0	x	20	grams each
# of E-tapes	0	х	7	grams each
Weight of Lap Sponges + E-tapes	0			
# of Pink Pads	0	x	500	grams
Weight of Pink pads**	0			
# of Blue Towels	0	x	75	grams each
Weight of Bloody Towels**	0			
	Tota	I QBL		
* if AJ, can add estimation of fluid				
** only weigh blue towels or pink pads if significant blood				

 QBL does not predict Hgb drop more accurately by EBL-(Hamm et al. 2018)

Interdisciplinary Skills Review

"Skills and Drills" stations-

- SBAR/Hemorrhage Guidelines and Risk Stratification
- Emergency Response Protocols
- Blood administration and Exsanguination Protocol
- Hemorrhage Cart and Uterotonic Medications
- Quantification of Blood Loss
- Intrauterine Tamponade Balloon Initiation
- B-lych Suture and Uterine Tamponade Balloon Placement
- Mandatory Competency- offered yearly to all new employees
