

Using Standard Work and Root Cause Analyses in Your Quality Improvement Work

Jennifer Condel, SCT(ASCP)MT, Manager, Lean Healthcare Strategy and Implementation
Pittsburgh Regional Health Initiative

Objectives

- Provide overview of quality improvement
- Incorporating standard work for quality improvement
- Applying root cause analysis for problem solving

What Is Quality Improvement?

A **culture** of how we work and do business each day in which all employees, **from frontline staff to senior leadership**, are **empowered** to drive change toward quality and strategic goals.

Culture of quality is a mindset...

Everyone, everyday, closer to better

It is **everyone's** responsibility to promote and participate in a continuous improvement culture within their daily activities.

What Is Quality Improvement?

Applies a **systematic approach** to problem solving

- **Gradual improvements** in everyday processes to improve quality of services, reduce variations and redundancies, and increase customer AND employee satisfaction
- Deliver best-in-class service to members in the community

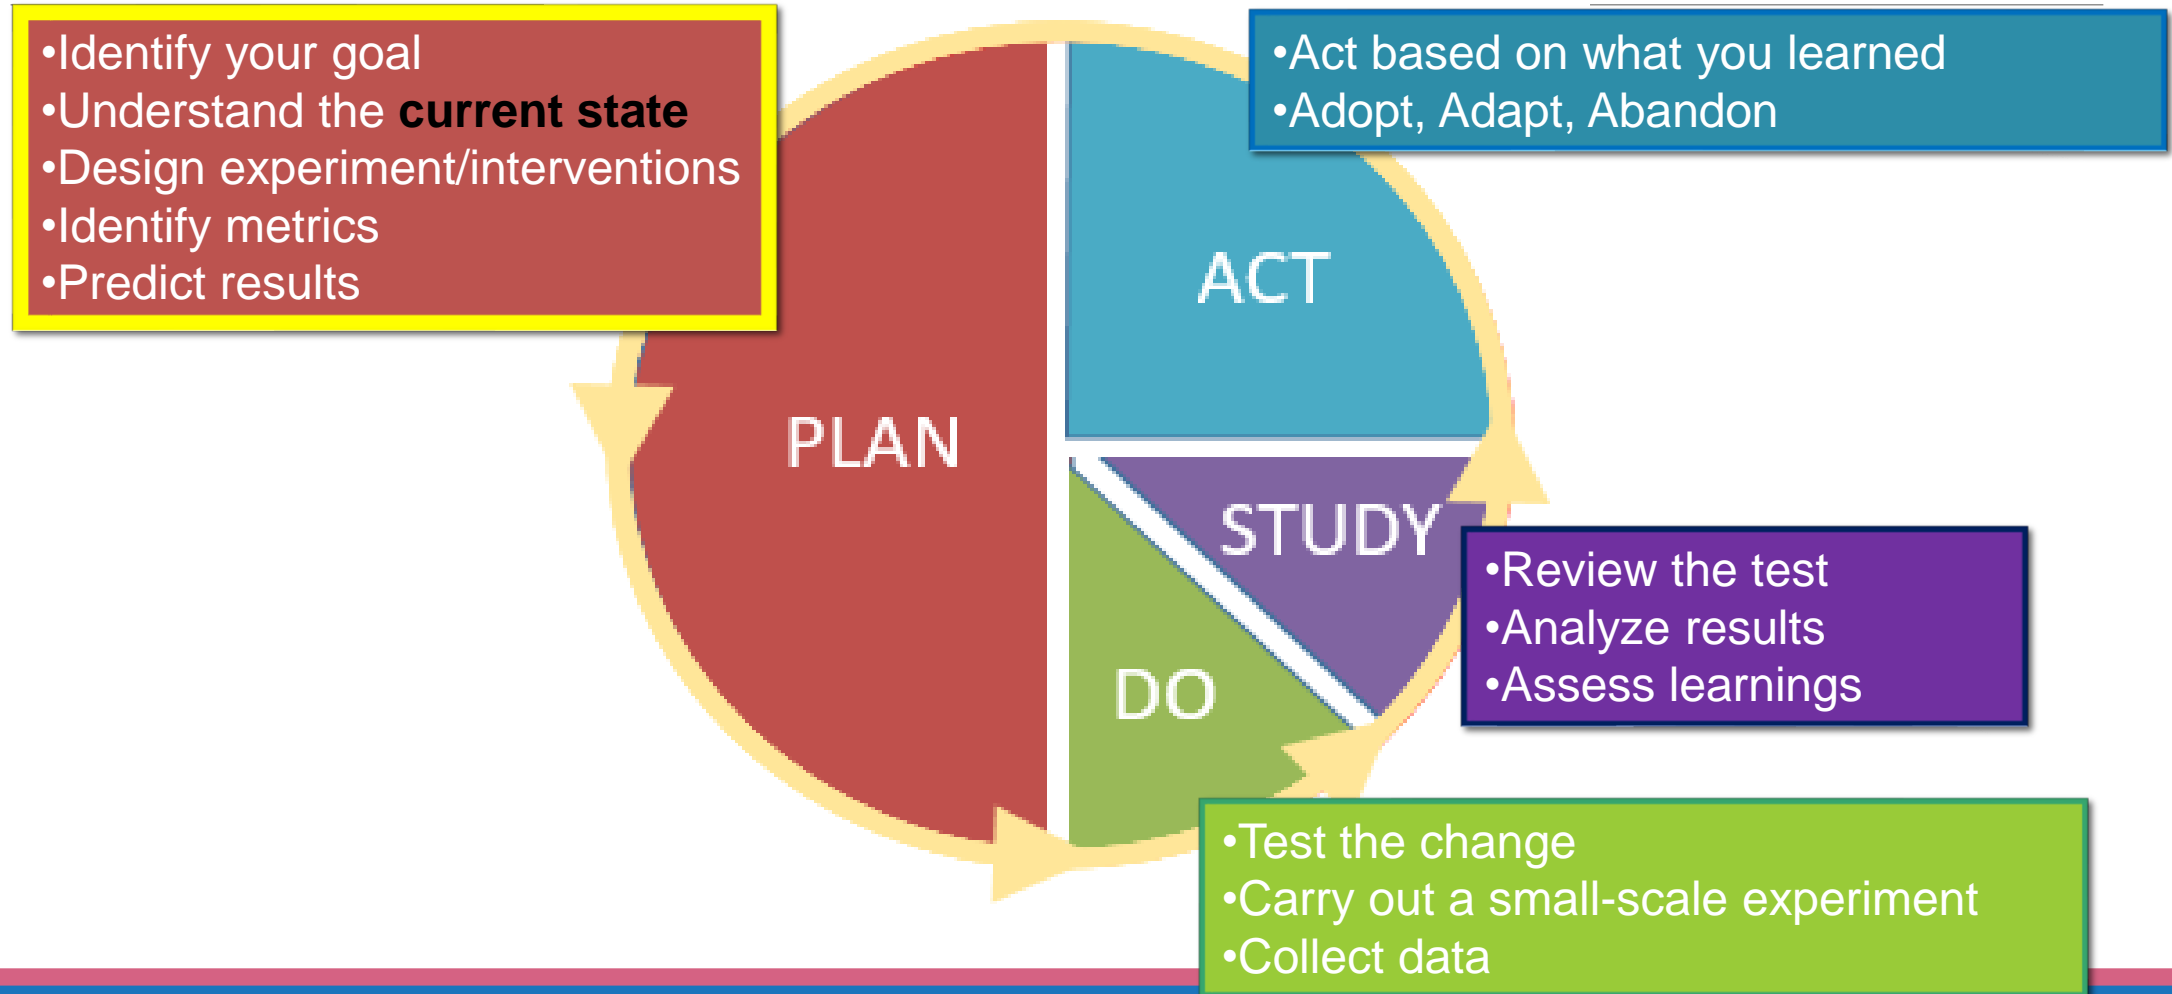

Poll Question #1:

What **quality improvement methodology or language** does your team use?

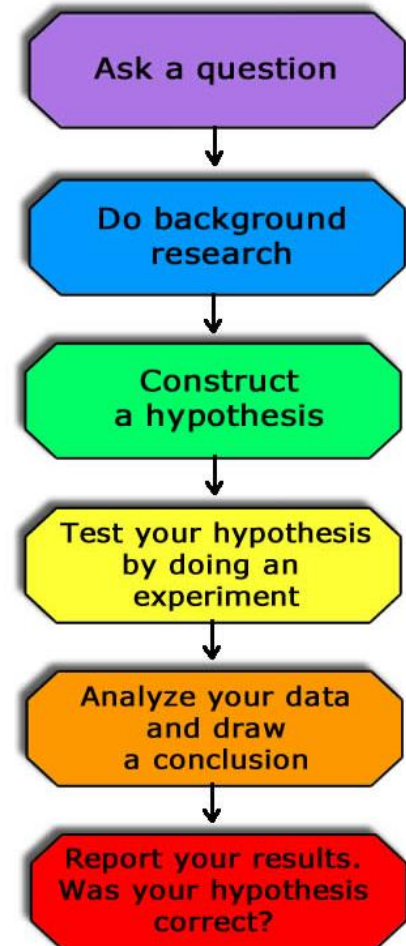

- Plan-Do-Study-Act (PDSA or PDCA)
- Lean/Toyota Production System (A3 thinking)
- Six sigma (belts, i.e. green belt)
- Other (*type in the chat*)

An approach to standardizing problem solving

PDSA is Rooted in the Scientific Method

- ✓ Identify the problem logic
- ✓ Gather data (objective observation)
 - Gain consensus among stakeholders
- ✓ Root cause analysis process focused
- ✓ Establish a hypothesis (“X will happen if these countermeasures are implemented”)
- ✓ Conduct an “experiment” by implementing countermeasures
- ✓ Verify the hypothesis (measurement)

Where do you start your QI efforts?

Ask the team:

- Are your patient's needs being met?
 - Right care, right time
- Do staff have what they need to be successful in their work?
- Are there defects or inefficiencies in how work is done?
 - Value added vs. non-value-added work activities (DOWNTIME)

How do you identify
improvement opportunities
in your day-to-day work?

Think About...

Do you have work that keeps you BUSY
but doesn't add value?

- What is getting in the way of achieving your work goals?
- What activities of your role add value to your patients? What would you like to be doing more of?
- What activities of your role do not add value to your patients or make the best use of your time?

Value added

Non-value added

Types of Wastes: WASTES		
Waste	Definition	Examples
Defects/ Rework	Doing something over, repeated rework and repeat	<ul style="list-style-type: none">• Rejected reports, medical• Rejected images, lab• Rescheduling service requests• Rescheduling people about service beds or appointments
Over-Production	Generating more parts, information, or services before they are needed	<ul style="list-style-type: none">• Copies of reports sent unnecessarily• Multiple staff receive same information to ensure completeness• Test preparation when the test does not show up• Printing data that is not used
Waiting	Standing in place in expectation of an event	<ul style="list-style-type: none">• Claims waiting for authorization to be available• Staff waiting for service completion• Claims left for appointments
Not Clear/ Confusion	Unable to complete work due to missing, incorrect, or confusing information	<ul style="list-style-type: none">• Clarification of orders• Ambiguity• Higher time taken• Miscommunication
Transport/ Motion	Unnecessary movement of equipment, supplies, or people	<ul style="list-style-type: none">• Searching for staff when they are needed• Searching for charts, supplies or equipment• Poorly located storage and service areas
Inventory	Too much or too little of anything that affects safety or other care	<ul style="list-style-type: none">• Unnecessary office supplies• Unneeded forms or educational materials• Obsolete equipment
Skills Ignored	Loss of time, skills and wisdom by failing to engage or train to employees	<ul style="list-style-type: none">• Employees skills not used to their full potential• Employees suggestions for improvement not taken seriously• Ineffective staff not part of meetings or work
Excess Processing	duplicating effort	<ul style="list-style-type: none">• Asking for the same information multiple times• Entering the same data into multiple charting systems

Types of Waste: **DOWNTIME**

Waste	Definition	Examples
Defects/ Rework	Doing something over (repeated rework and repair)	<ul style="list-style-type: none"> Records / reports misfiled Incorrect charges / billing Resubmitting service requests Reminding people about overdue tasks or appointments
Over Production	Generating excess parts, information, or services before they are needed	<ul style="list-style-type: none"> Copies of reports sent automatically Multiple staff review same information to ensure completeness Visit preparations when the client does not show up Collecting data that no one uses
Waiting	Staying in place in expectation of an event	<ul style="list-style-type: none"> Clients waiting for a psychiatrist to be available Staff waiting for service authorization Clients late for appointments
Not Clear/ Confusion	Unable to complete work due to missing, incorrect or confusing information	<ul style="list-style-type: none"> Clarification of orders Regulations Vague care plans Incomplete transfer summaries

Ex: Variability in SUD screening across team

Ex: Variability in Inter-rater reliability rates

Transport/ Motion	Unnecessary movement of equipment, supplies, or people	<ul style="list-style-type: none"> Searching for staff when help is needed Searching for charts, supplies or equipment Poorly located storage and service areas
Inventory	Too much or too little of anything that affects safety or delays care	<ul style="list-style-type: none"> Unnecessary office supplies Outdated forms or educational materials Obsolete equipment
Minds Ignored	Loss of ideas, skills and wisdom by failing to engage or listen to employees	<ul style="list-style-type: none"> Employee skills not used to their full potential Employee suggestions for improvement not taken seriously Frontline staff not part of redesign of work
Excess Processing	Duplicating effort	<ul style="list-style-type: none"> Asking for the same information multiple times Entering the same client data into multiple charting systems

Plan-Do-Study-Act (PDSA):

A way of **engaging and organizing teams** to continuously identify and act upon opportunities for improvement

Applied to **process changes** as well as behavior changes, and to problems big and small

Supports **deep examination** of problems

What is your current state for SUD screening or evaluating IRR?

What is the process? Do we have a process?

What is working well? What is not?

Quality Improvement Provides a New Perspective

Starts with how we look at day to day activities and processes

- **The power of observation:** Importance of watching and documenting things, not interfering and fixing things

- “It is about the **work processes, not the individual person** doing the work.”
 - Open, judgment-free communication between the team members
- **Involves the people who do the work** to help address the challenges
- Seeks to develop **long-term**, sustainable solutions to issues, not quick fixes or workarounds- what’s the root cause?

We need to define how work should be done...Standard Work

Documentation of the current best practice

Standard work is the foundation of continuous improvement.

We can't improve a process unless we know how it happened in the first place.

Standard Work Tells Us...

- Who does what?
- How do you do it?
- When do you do it?
- Where do you do it?
- Why do you do it that way?

Activities

Activities (work) must be highly specified as to:

- Content
- Sequence
- Timing
- Location
- Expected outcome

GOAL: Building successful processes for those that do the work

Quality care for patients

How?

Wet your hands with clean, running water (warm or cold), turn off the tap, and apply soap.

Lather your hands by rubbing them together with the soap. Be sure to lather the backs of your hands, between your fingers, and under your nails.

Scrub your hands for at least 20 seconds. Need a timer? Hum the “Happy Birthday” song from beginning to end twice.

Rinse hands well under clean, running water.

Dry hands using a clean towel or air dry them.

Keeping hands clean is one of the most important things we can do to stop the spread of germs and stay healthy.

LIFE IS BETTER WITH

**CLEAN
HANDS**

CS310027-A

Standard Work: *How to wash your hands*

Content:
I know what to do!

How?

Wet your hands with clean, running water (warm or cold), turn off the tap, and apply soap.

Lather your hands by rubbing them together with the soap. Be sure to lather the backs of your hands, between your fingers, and under your nails.

Scrub your hands for at least 20 seconds. Need a timer? Hum the "Happy Birthday" song from beginning to end twice.

Timing:
I know if I am ahead or behind in the process.

Dry hands using a clean towel or air dry them.

Standard Work: How to wash hands

Location:
I know where the activity occurs.

Sequence:
I know that I am doing it in the right sequence!

Expected Outcome: Clean Hands!

Because the work is so explicit, I can figure out if there is a problem and call for help.

What to do!

CARE OUTREACH STANDARD WORK

Step	Content	Location	Timing	Outcome
Identification	1. Review referrals from Case Managers	Office	Daily	Clients are added to lost to care list for outreach
	2. Review closed cases for clients who fell out of contact	File Room	Monthly	
	3. Print performance measures and identify high risk patients	CAREWare	Monthly	
	4. Answer physician referral calls	Phone	Daily	
Contact	5. Call/E-mail client primary information	Phone/Computer	3 attempts over 10 days	Client engages in care outreach
	6. Call/E-mail client emergency or alternate contact	Phone/Computer	3 attempts over 10 days	
	7. Call/E-mail provider to research client contact information	Phone/Computer	3 attempts over 10 days	
	8. Initial contact with client	Phone	15 minute increments	
Appointment	9. Review medical facility options with client and give contact information	Phone		Client attends medical appointment
	10. If requested, make client an appointment at medical facility	Phone		
	11. Call patient one day prior and remind of medical appointment	Phone		
	12. If requested, provide transportation or incentive	Client location		
	13. If requested, attend appointment with patient	Medical facility		
Support & Follow-up	14. Follow up with MD for lab results	Medical facility		Client remains engaged in care
	15. Enter data collection into MAI spreadsheet	Office		
	16. Follow-up with other services for client	Office		
	17. Follow-up with client on next steps	Phone		

From Current Condition to Future State

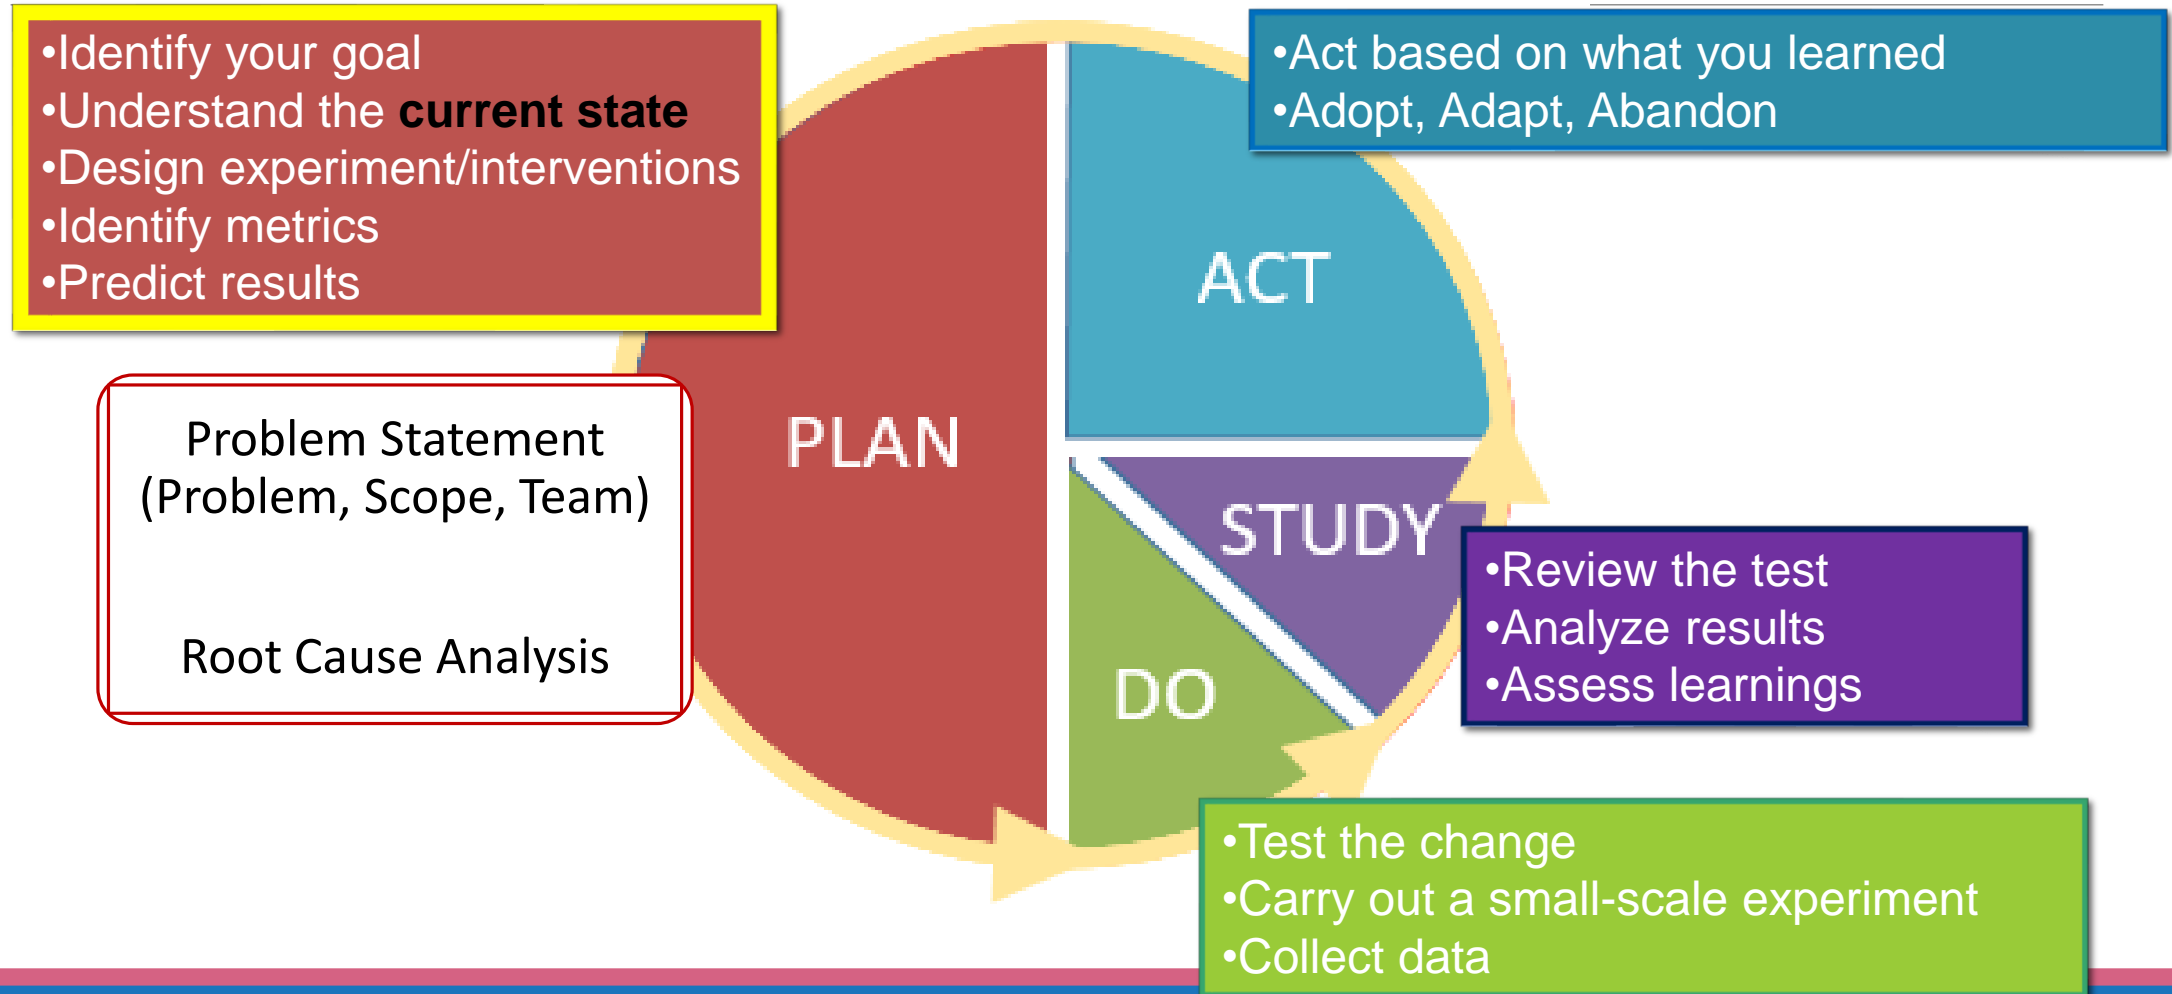

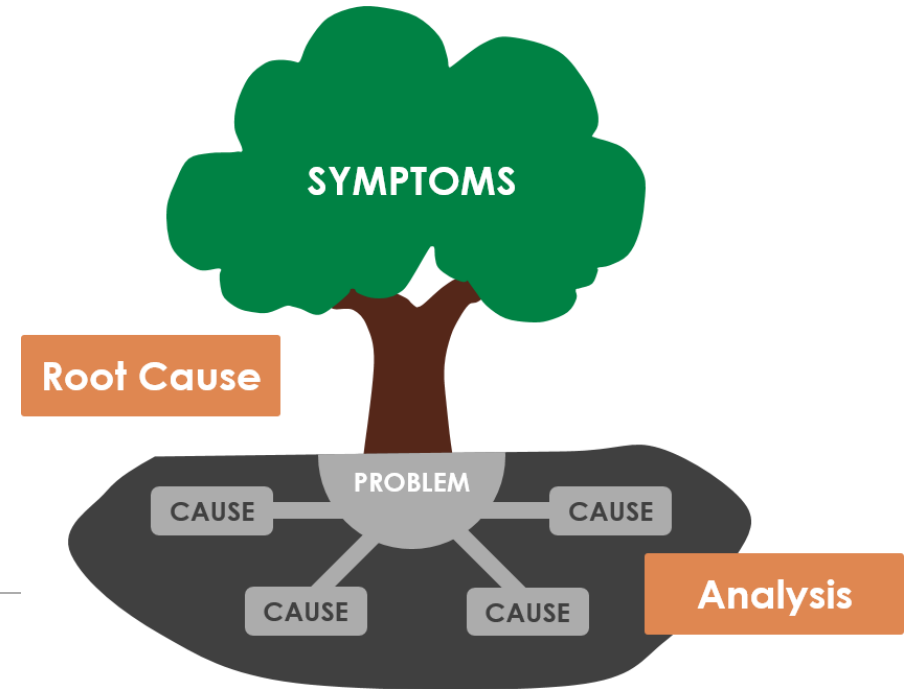

From Current Condition to Future State

An approach to standardizing problem solving

Understanding the Current Condition through Root Cause Analysis

Poll Question #2:

Have you used a **root cause analysis tool**?

- Yes
- No

Poll Question #3:

If yes, what did you find to be **most beneficial** in your experience?

- Being engaged in the process/heard
- Expanded my understanding of the problem and complexity
- Appreciated the need to look beyond the symptoms
- Enabled me to focus on process not people

Broken Systems and Processes

*Something is broken...
even when we're fully
staffed or have the best
employees, or try to be
really careful and
mindful of our work*

ERRORS HAPPEN

Blaming vs. Explaining

Focus on the
process

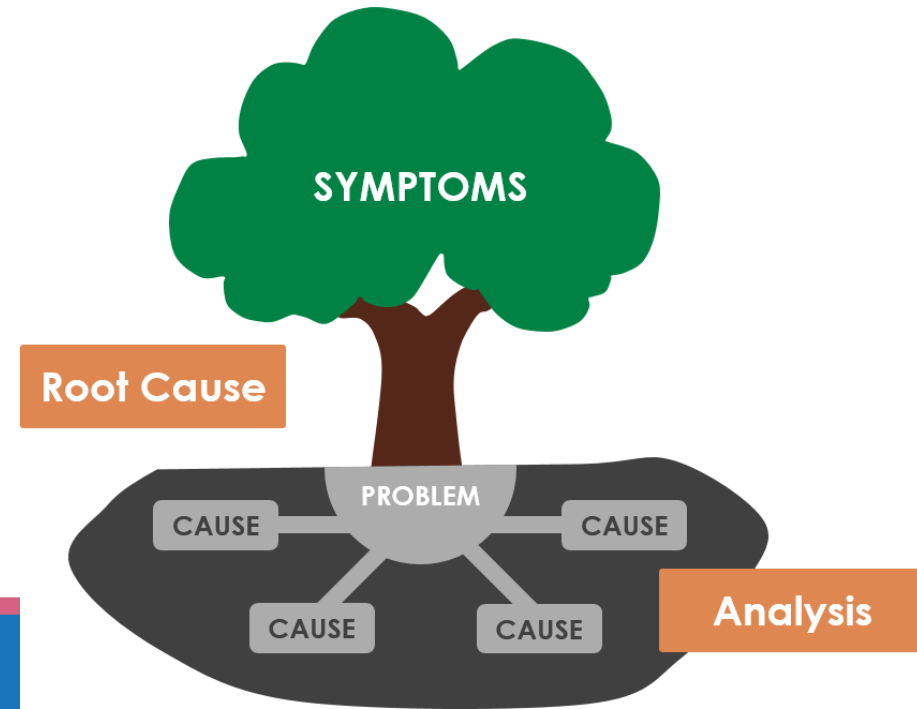

These are **not** root causes ...

“Staff negligence”

“User error”

“They doesn’t care”

“Someone else did it”

Understanding Root Causes

Later

As a result...

Because...

Sooner

Symptoms

- Result or outcome of the problem
- What you see as a problem (*Obvious*)

Achy, weak, tired

The Problem

- Gap from goal or standard

Fever

Causes

- "The Roots" – system below the surface, bringing about the problem (*Not Obvious*)

Infection

How do you determine
the root cause?

Root Cause Analysis Tools

“Fishbone” Diagram

- Get the whole team to contribute their ideas about the causes.
- Go fishing!

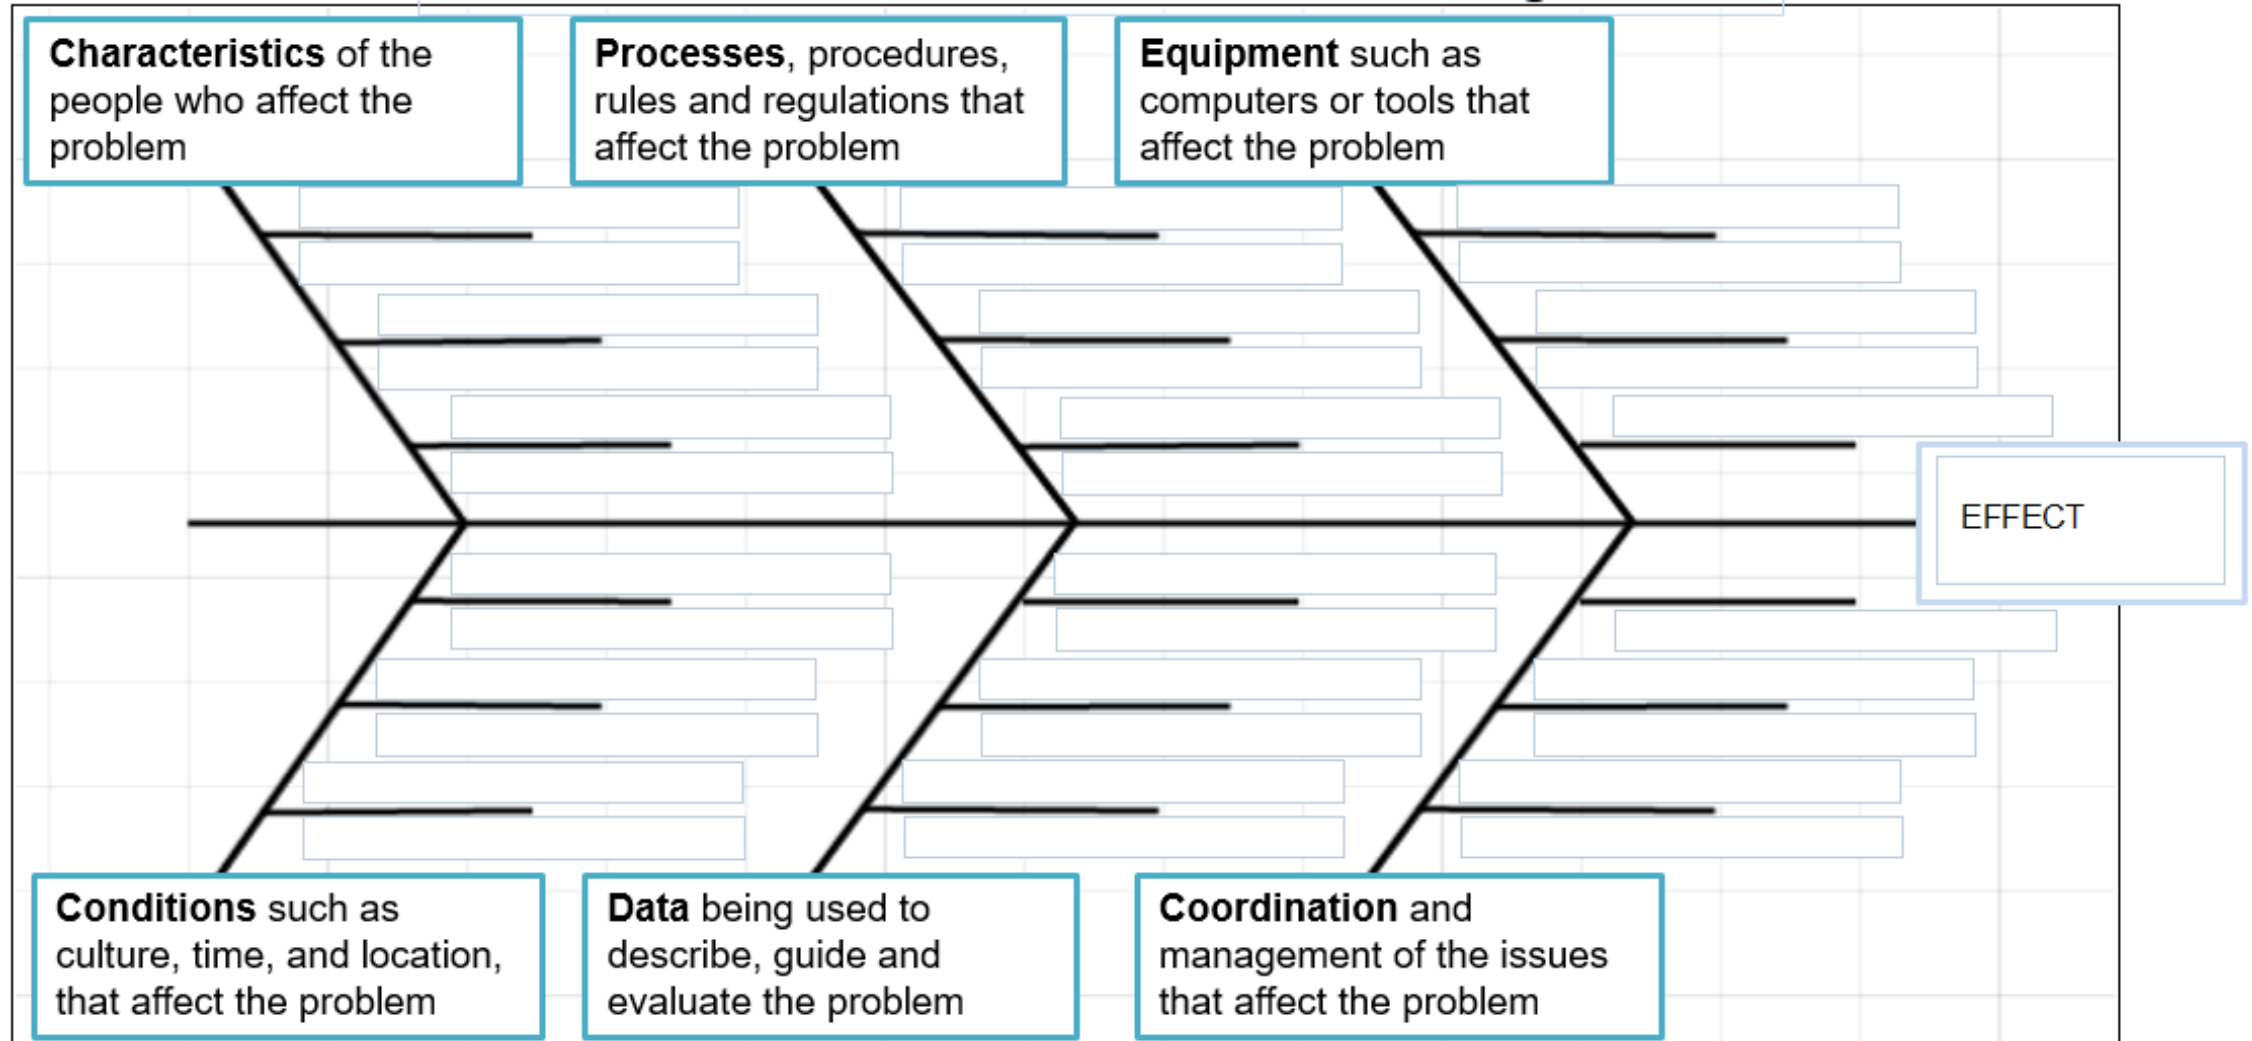

5 Why's

- Get to the true causes by asking **why** the problem occurred.
- Drill down **deeper!**

Cause and Effect or “Fishbone” Diagram

Cause and Effect or “Fishbone” Diagram

Characteristics of the people who affect the problem

Processes, procedures, rules and regulations that affect the problem

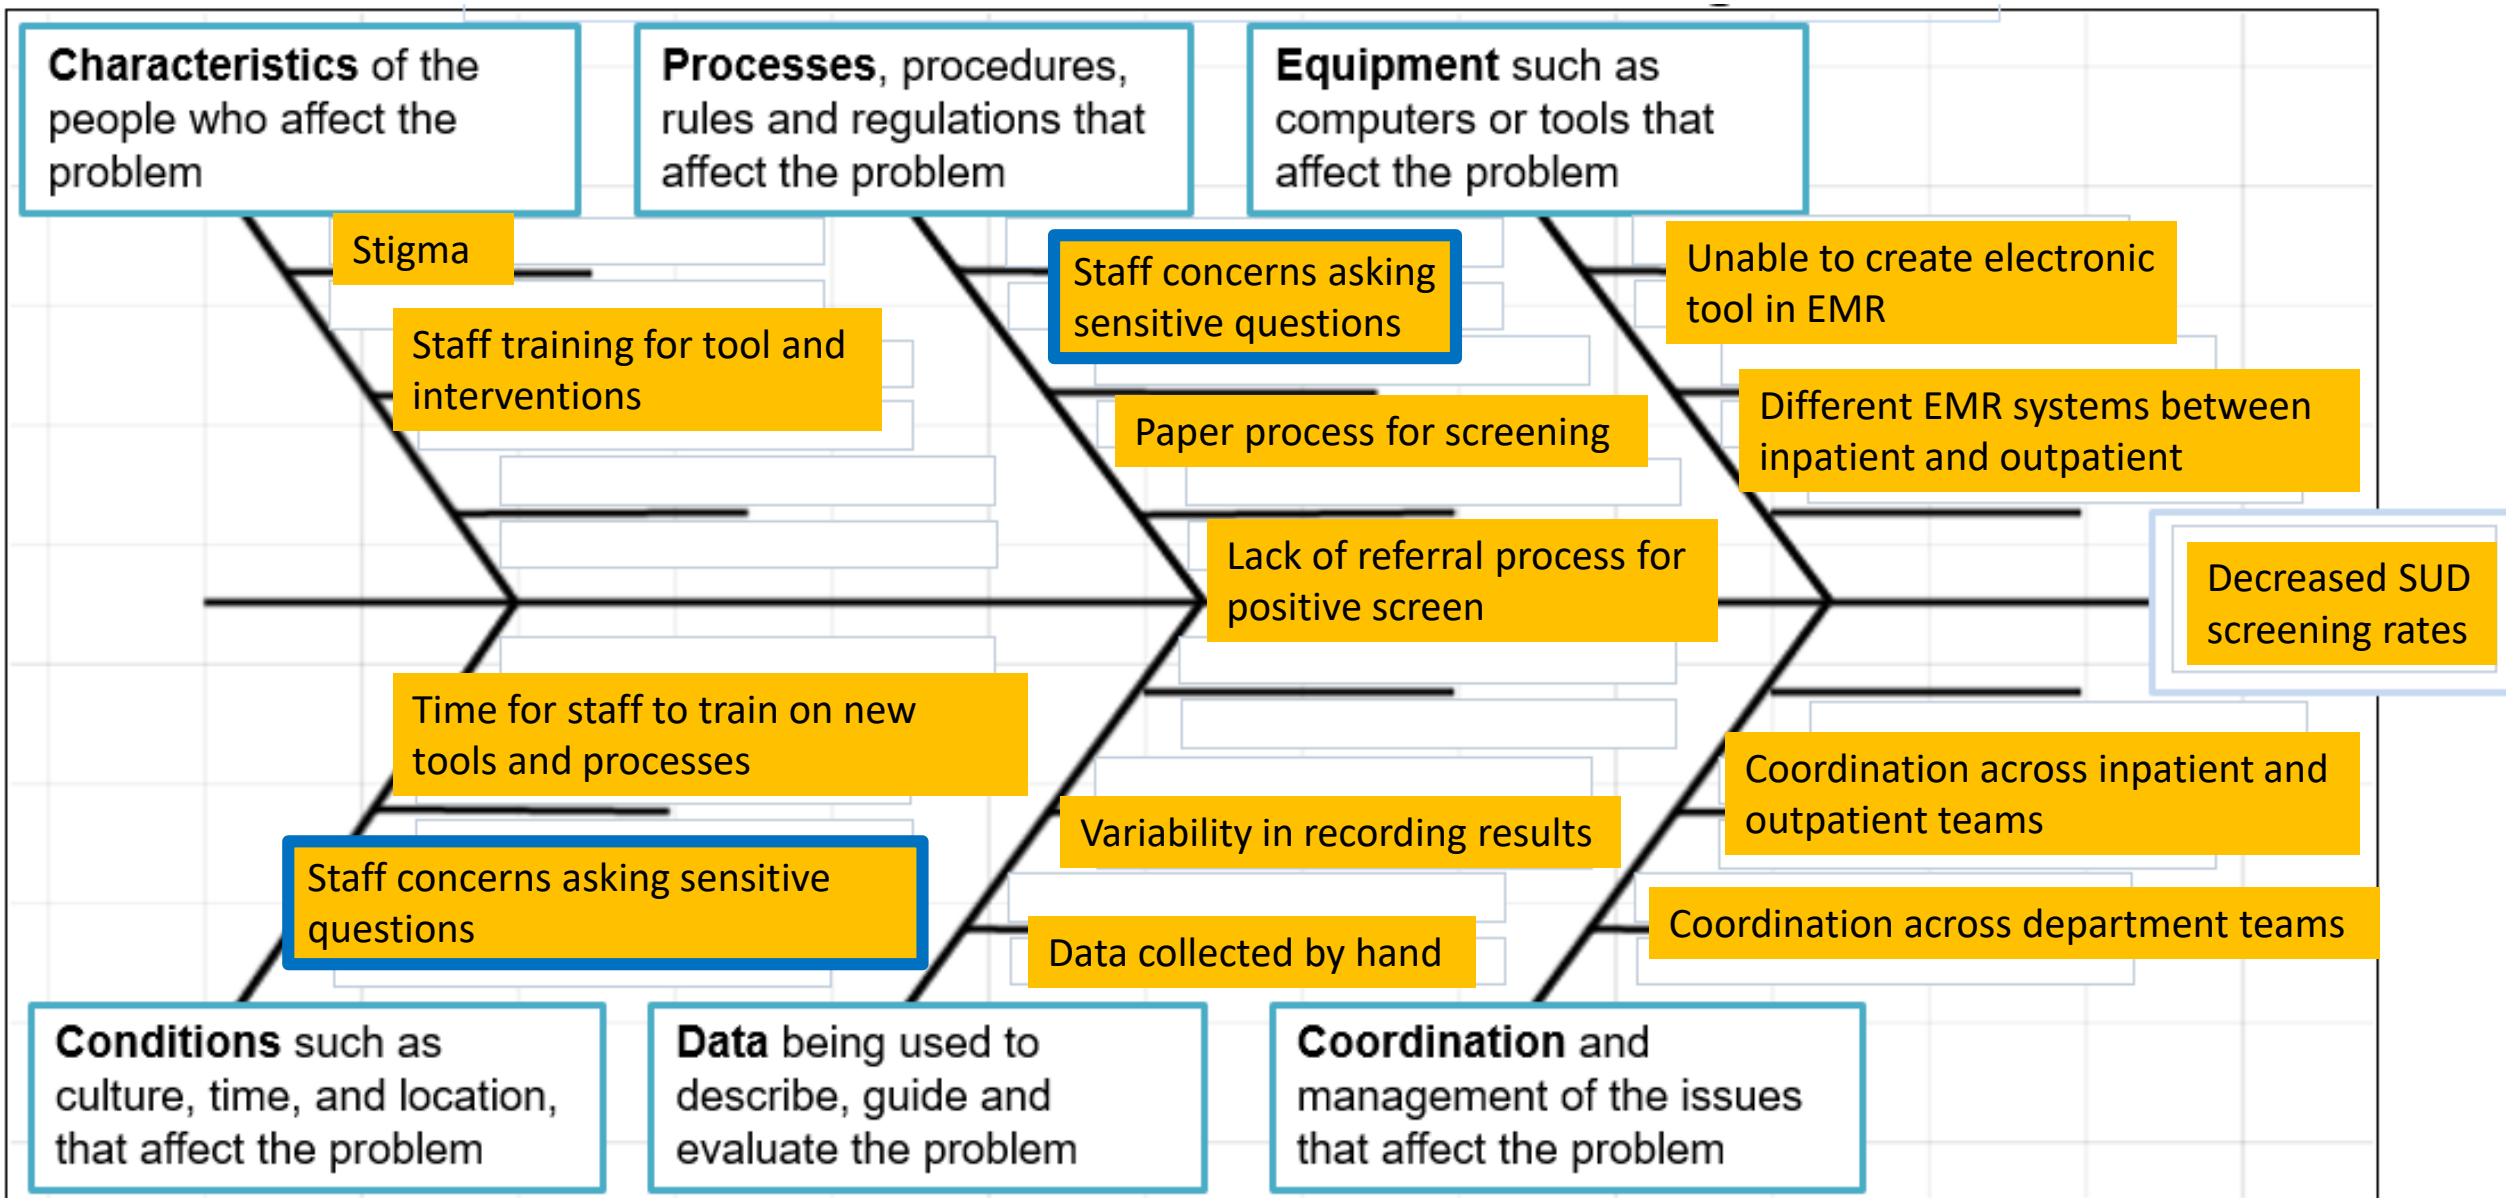

Equipment such as computers or tools that affect the problem

Decreased SUD screening rates

Conditions such as culture, time, and location, that affect the problem

Data being used to describe, guide and evaluate the problem

Coordination and management of the issues that affect the problem

Deciding Where to Focus Improvement Efforts

Prior Efforts	prior efforts to work on this issue → -1 (unsuccessful), +1 (successful), or 0 (none)							
Magnitude of Threat	<div><div></div><div></div><div></div><div></div><div></div></div>							
Likelihood of Harm								
Treatability								
Urgency								
Readiness								
	Decreased SUD screening rates	Prior Efforts	Magnitude of Threat	Likelihood of Harm	Treatability	Urgency	Readiness	Total
Causes		-1 to +1	0 to 5	0 to 5	0 to 5	0 to 5	0 to 5	
Staff concerns asking sensitive questions		-1	2	2	2	4	2	11
Unable to create electronic tool in EMR		0	2	1	2	2	3	10

5 Why's

- Method to pursue deeper, systematic causes of a problem
- Narrow the field and focus on the most significant potential causes
- Create a causal chain by asking a series of “Why” questions

“The important thing is not to stop questioning.”
-Albert Einstein

Root Cause Analysis: *5 Why's Example*

Problem: Flight 1549 landed in the Hudson river

Root Cause Analysis: *5 Why's Example*

Problem: Flight 1549 landed in the Hudson river

Why? Because the pilot had to do an emergency landing

Why? Aircraft unable to maintain altitude

Why? Aircraft lost both engines

Why? Bird strike

Why? Nesting area on flight path

The most
dangerous phrase
in the language is 'we've
always done it this way.'

Barack Obama

*The significant problems we
have cannot be solved at the
same level of thinking with
which we created them.*

--Albert Einstein

Roadmap: Work Design Principles

Rule 1: *Activities* - highly specified work of a position (content, sequence, timing, location)

Rule 2: *Connections* – direct relationship between people or processes (unambiguous)

Rule 3: *Pathways* – process is defined & simple

Rule 4: *Improvement* - respond to problems immediately, where they occur, design an experiment, with those doing the work, with a teacher

Source: S. Spear and H. Kent Bowen, “Decoding the DNA of the Toyota Production System”, Harvard Business Review, Sept.-Oct., 1999, p. 96.

Rule 4: One Rule of Improvement

Improvements are:

- Direct responses to a problem
- Made as close as possible to the problem
- Experiments using PDSA thinking
- Made by those doing the work
- Guided by a teacher/coach
- Made aiming toward perfection

Improvements

Rule of Improvement...in the spirit of quality improvement, never say the project is finished! You still need to monitor, create the standard work and sustain the gains.

Always strive for continuous improvement.

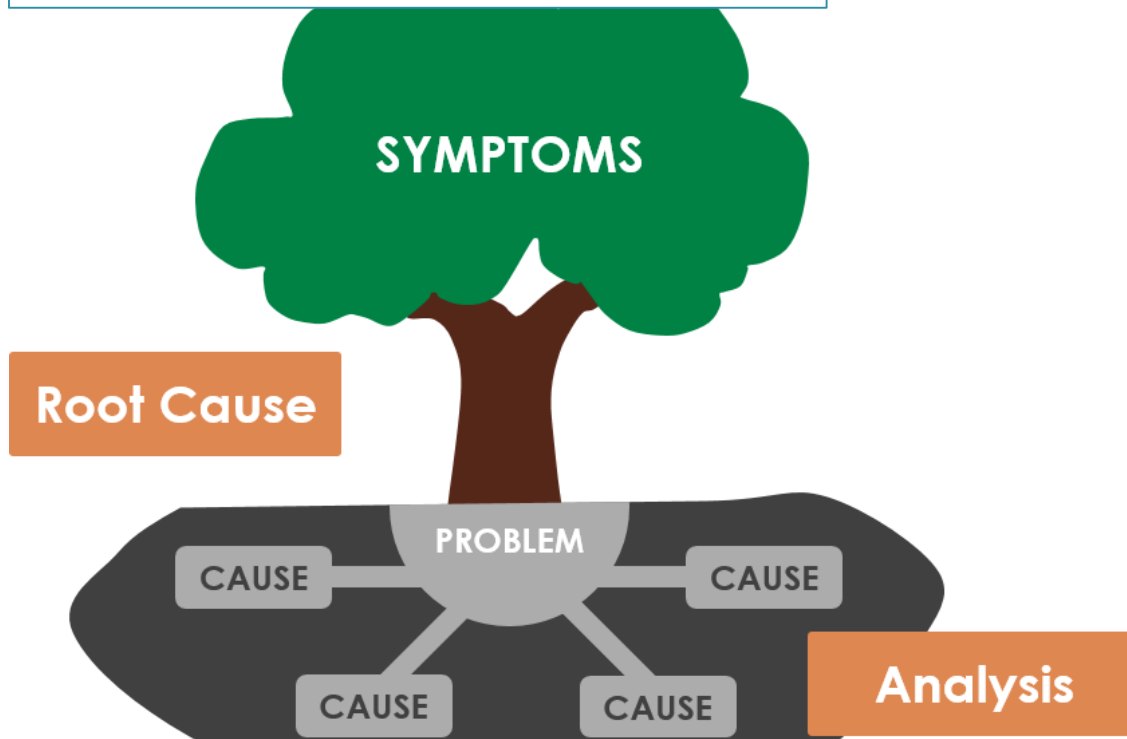

Improvement

7 Use the Paper towel to open the door

Root Cause Analysis in Summary

Addressing symptoms will allow continued *recurrence* of the problem

Addressing the root cause will *eliminate* the problem

Listen to the people on the front lines, especially staff and consumers

Explore each suggestion, rather than judging it

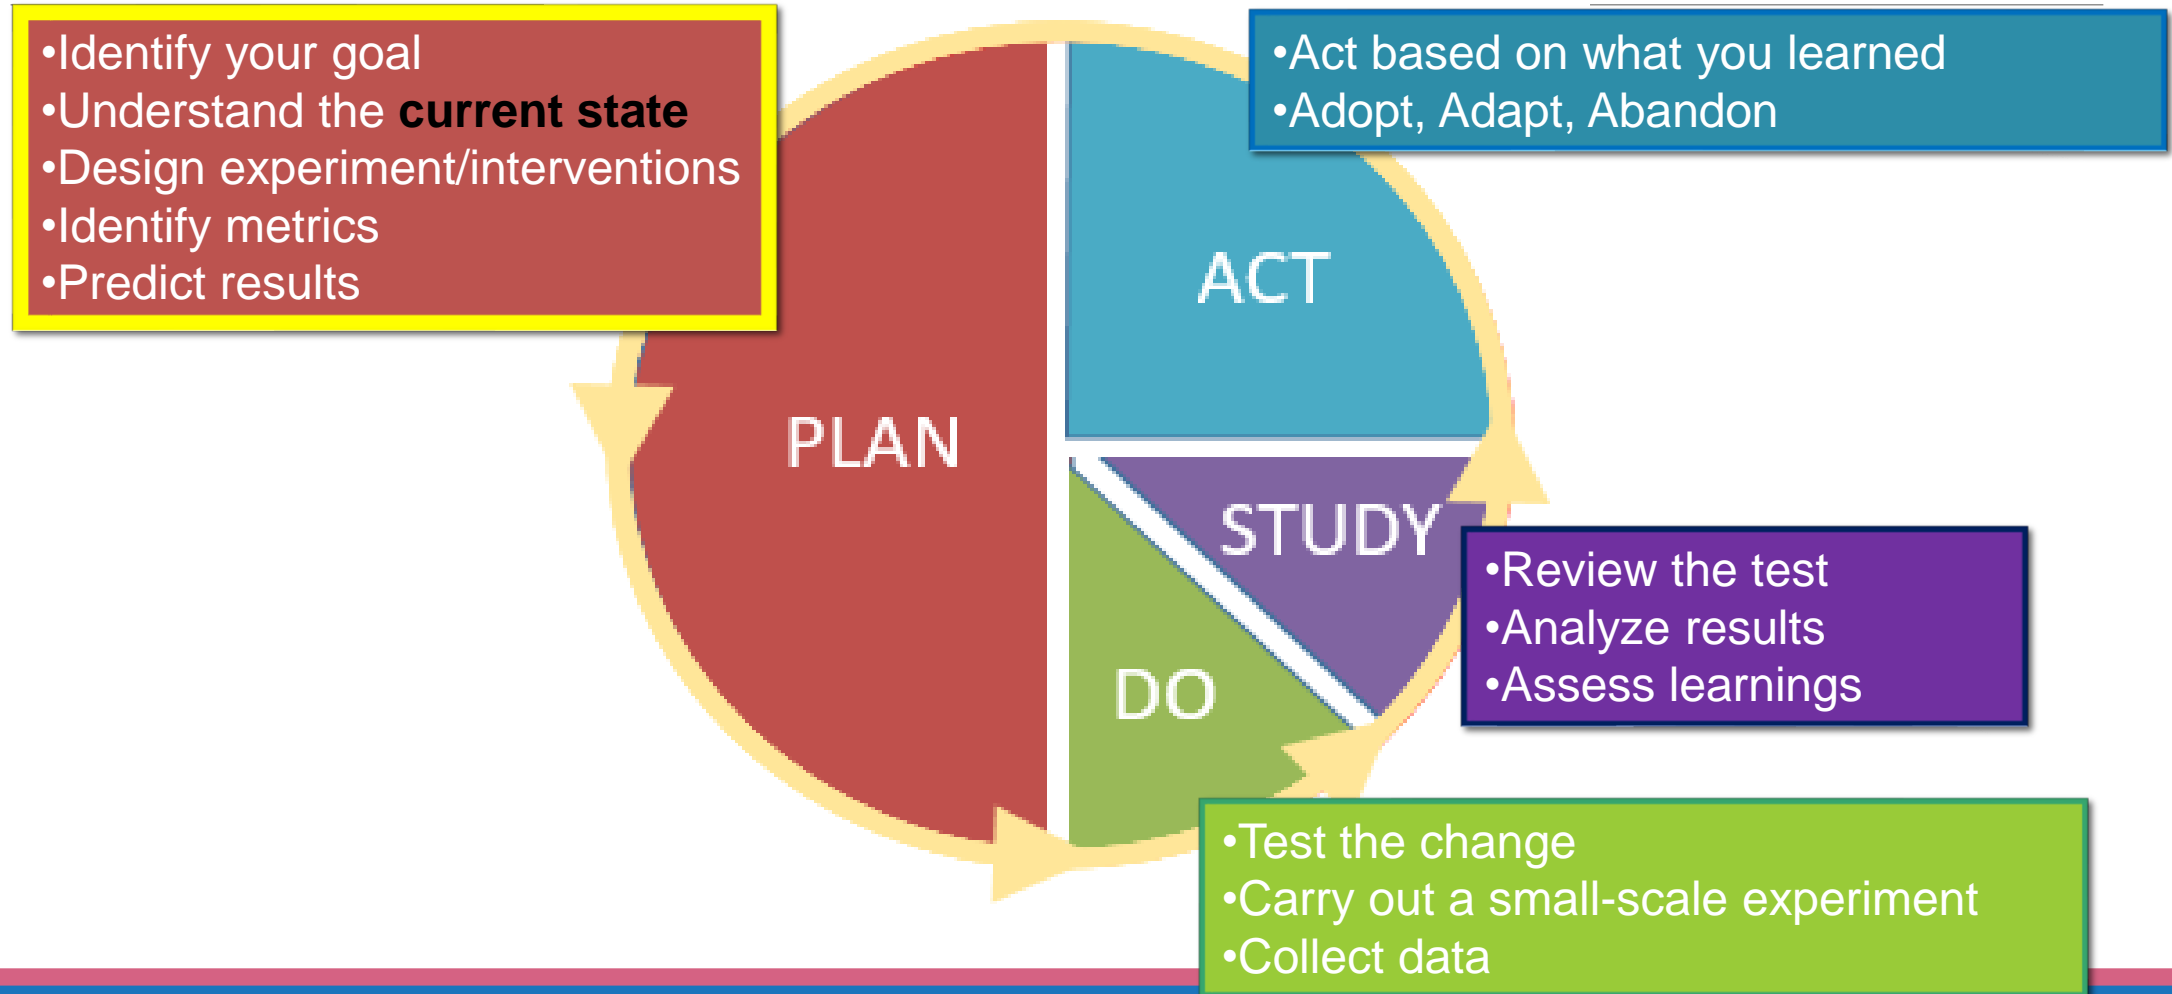

Identify the causes of the problem not the symptoms

Tools: fishbone diagram, 5 WHY's

WHY, not Who

It's the process, not the people

An approach to standardizing problem solving

Tips for PDSA Problem Solving

Use **data** to understand the current condition and measure your experiments

Make **incremental improvements** to move closer to the target condition

Measure success of the improvements—do the improvements move you closer to the target condition?

Use tools to make work easier and processes flow more smoothly- **standard work**

Involve the people who do the work— “**the experts**”—in work redesign

“Every process is perfectly designed for the outcomes you get”

Create a Learning Organization

- ✓ Create a community of scientists
- ✓ Look at work with a new perspective
- ✓ Perform continual experiments that improve the **system**
- ✓ Challenge the most basic assumptions about what can and cannot be changed
- ✓ Learn by doing

Everyone, everyday, closer to better

Poll Question #4:

What **gets in the way** of applying quality improvement methodology?

- Knowing where to start
- Time
- Comfort in applying QI techniques
- Resources/team
- Other (*share in the chat*)
