

Engaging and Retaining Pregnant Women with Substance Use Disorders

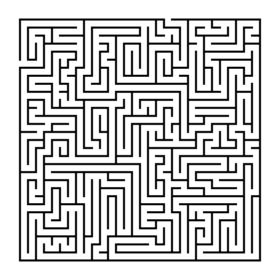

Dennis J. Hand PhD & Alice C. Fischer LSW
Maternal Addiction Treatment, Education, & Research (MATER)
Department of Obstetrics & Gynecology
Thomas Jefferson University

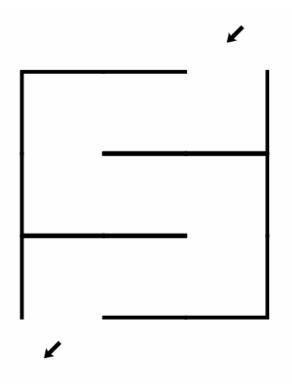

Overview

- Three fundamentals to initial and sustained engagement
 - 1) Minimize barriers to care
 - 2) Manage expectations
 - 3) Supportive and educated staff
- Our processes as an example
- Discuss strengths, weaknesses, and ideas

Minimize Barriers

Minimizing Barriers

- Simplify and expedite processes, reducing administrative burden
- Open access to medications for opioid use disorder
- Communicate often and clearly about process
- Understand and mitigate insurance issues
- Create a network of resources
- Carry the baton / pass the torch

Accessibility: Supportive and Educated Staff

- Evolving Needs
 - Stabilization Process
 - Patient motivation / Behavioral change
- Dignified and Respectful communication
 - Safe environment
 - Consistency
- On-going learning about process, experience, resources

MATER's Model of Care Coordination

- Motivational Interviewing
- Needs Assessment
- Treatment placement
- Program preparation
- Patient Navigation through systems
 - Empowering self-advocacy
- Reengagement
